Business Model Canvas
BUILDX HACKATHON

Team ID:	Date:
BX062 (Team Iravora Void, KARE)	04-11-2026

Key Partners

- Cloud hosts (Vercel, Render) and later AWS / Azure India regions
- Log, SIEM and API gateway vendors we plug into
- AI providers (LLM APIs) whose prompts we clean
- DPDP compliance auditors and law firms
- Pilot partners with consented real logs
- KARE labs and mentors
- Open-source NLP and post-quantum crypto libraries

Key Activities

- Build and harden the firewall core and AI detectors
- Add new identifier types and languages
- Run Aran Cloud and on-site data planes
- Red-team testing and audits
- Onboard and support pilot customers

Key Resources

- Detection engine: check-digit maths, AI models, registries
- Per-person key vault and erasure receipts
- Aran Cloud SaaS, SDK and console
- Team skills in security and AI/ML
- Test sets of real log lines

Value Proposition

A firewall for personal data in motion, for any organisation.

- Finds IDs, phones, cards and names in logs, APIs, exports and AI prompts
- Swaps them for look-alike tokens that always fail the check digit
- Each destination gets its own tokens, so a leak names its source
- Erase a person = delete one key, with a quantum-safe receipt
- 91% of values removed vs 46% for regex; false alarms 2,506 to 60
- Helps meet DPDP Act duties (fines up to Rs 250 cr)

Customer Relationships

- Self-serve sign-up with a free Sandbox
- Monitor mode first, then enforce
- Signed alerts, dashboard and audit log
- Dedicated support for Enterprise

Channels

- Self-serve web console and docs
- SDK and one-URL route setup
- Direct sales to CISOs / DPOs
- Hackathons, LinkedIn, cloud marketplaces

Customer Segments

Any organisation that holds personal data:

- Banks, NBFCs and fintechs
- Hospitals and health-tech
- Telecom and e-commerce
- SaaS and IT service firms
- Government and education
- Startups adding AI chatbots

Most important first: regulated firms facing DPDP fines from May 2027.

Cost Structure

- Cloud hosting and compute for the firewall (largest cost)
- AI model hosting and training
- Team salaries: security and AI/ML engineers
- Security audits, certifications and legal review
- Sales, marketing and customer support

Revenues Streams

- SaaS plans by API calls: Sandbox free (10k/month), Growth Rs 25,000/month (1M calls), Enterprise Rs 2.5 lakh/month (50M calls)
- Overage per 1,000 extra calls (Rs 30 / Rs 10)
- On-site data plane licence for firms that keep data in-house
- Setup, compliance reports and support contracts

Customers pay to avoid breach costs (avg Rs 22 cr) and DPDP fines.
